

# TRACK SYSTEMS FOR GRAIN CARTS

## ST-025

# Soucy TRACK

The Soucy Track ST-025 modular track system is easy to install without major modifications on most of the popular grain carts. With the unique conception of our ST-025 track kit, you will benefit from increased flotation when in the fields which results in reduced soil compaction. You will be able to retrieve your harvest even in the most difficult conditions.

### REDUCED COMPACTION = SUPERIOR HARVEST

The passage of heavy equipment on tires can damage the integrity of the soil. Our system spreads the weight over a much larger surface significantly lowering the ground pressure and deep soil compaction which have negative effects on crop yield.

### FLOTATION = EFFICIENCY & FLEXIBILITY

The superior flotation capabilities of our track system when compared to tires permits you to enter your fields in difficult conditions created by muddy or wet soil. The system will give you unequalled stability when "on the go" loading in rough terrain.

Simple track tensioning system designed for easy access.

Grease lubricated wheel axles for enhanced longevity.

Rubber track profile designed for increased flotation and high load applications.

Simple torsion bar reinforcement adapts to most grain carts.

### STATE OF THE ART TECHNOLOGY

- ✓ Minimalist track beam and axle train design made of high quality steel for superior serviceability and durability.
- ✓ Durable steel-belt reinforced rubber track adaptable for various applications.
- ✓ Ultra resistant rubber wheels made of ultra high molecular weight polymer (UHMW) with resistant rubber lining.

# TECHNICAL DATA ST-025

## DIMENSIONS

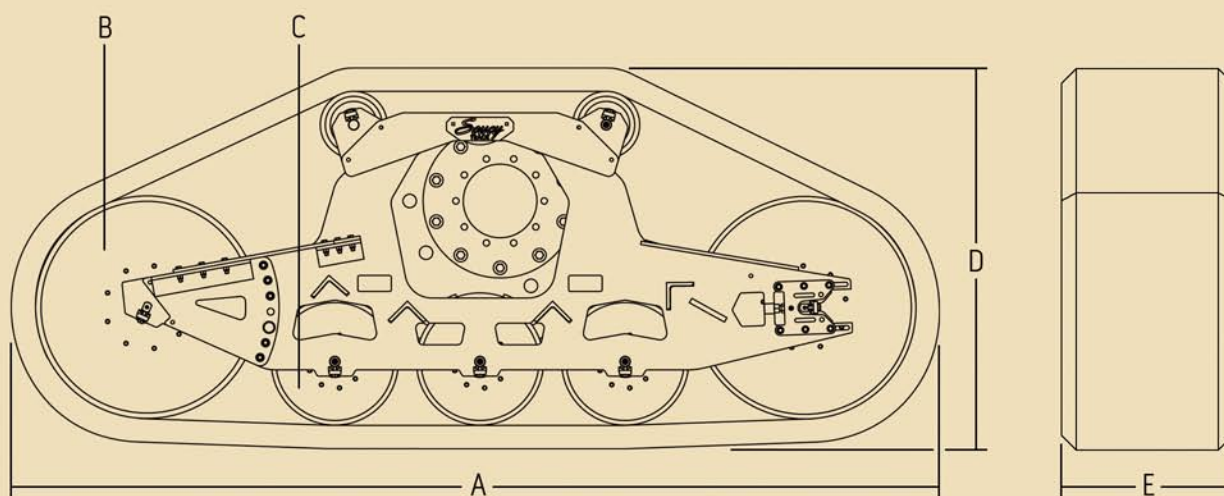

Description	Millimeters	Inches
(A) Total length	3 537	139,25
(B) Tension wheel diameter	845	33,25
(C) Support wheel diameter	483	19
(D) Height	1 492	58,75
(E) Track width	635	25

## Load capacity

21 591 kg / 47 600 lbs  
850 bushels maximum

## Track kit includes

- (2) Frames and tracks (pre-assembled)
- (2) Torsion bars
- (2) Torsion bar adapter plates
